

OneTime Messenger

POSTED

Tuesday, February 23, 2016

"Highly encrypted for maximum privacy & security."

We operate our own servers around the world to offer secure encrypted communication for users and make the communication NSA proof. All conversations are highly encrypted and private and secure. No backup of messages, pictures or other files is kept on the server.

Onetime Messenger, "Simple Secure Messaging", Owned by Users.

A user centred messaging app that proposes to put power back into the hand of their most important stakeholders: the users, OneTime Messenger is first social media app that would be owned by those who use it, it claims to offer a "simpler secure messaging" experience which protects the privacy of users. The messenger has been launched for iOS and android users. The messaging app caters to a niche that deserves voice and video calls, unlimited group chat, free communication forever. Anyone who has a large group of friends and those who want to stay connected to multiple people in a professional capacity will find group chats with an unlimited number of people group chats feature of OneTime Messenger to be far superior to the group chat feature offered by most other Over The Top (OTT) apps currently available.
